HOBBIES & INTERESTS

An accomplished chess player, having played for the England junior team in addition to winning numerous individual and team tournaments. My enthusiasm also extends to photography, running and learning about new cultures which has resulted in me travelling to or living in 38 countries in 5 continents.

PROFILE

Versatile software developer with comprehensive experience in designing and developing backend, web and WinForms applications using C#, .NET, AWS, React, and SQL. I have consistently delivered innovative software solutions in sectors such as healthcare, sports betting and retail, markedly improving user experience and operational efficiency. I am actively seeking a new opportunity within an organisation where I can contribute to challenging projects with a meaningful impact and continue my professional development. Please visit my website, GitHub, and LinkedIn profiles.

EDUCATION

MSc Computer Science, Sheffield Hallam University, (Distinction)

SEPTEMBER 2020 — SEPTEMBER 2021

BSc Mathematics, University of Leeds, (Hons)

SEPTEMBER 2013 — JUNE 2016

A-Levels, Thomas Rotherham College

SEPTEMBER 2010 — JULY 2013

- A-Levels: Further Maths (A), Maths (A), Economics (B), General Studies (B), Physics

COURSES

CS50, Harvard University

March 2023 — July 2023

The Complete Web Development Bootcamp, Udemy

October 2021 — January 2022

EMPLOYMENT HISTORY

Software Developer - Angstrom Sports

JULY 2024 — PRESENT

Tech Stack: C#, .NET, MySQL, AWS, Docker, Kubernetes, Kafka, Redis, Azure DevOps

- Built backend services and AWS Lambda functions to retrieve, process, and persist data from third-party providers (ESPN, Genius, SportRadar, PFF) into MySQL and S3, forming the core of the team's data ingestion pipeline.
- Migrated all service CSV outputs and database query results to Parquet format on S3, improving downstream data compatibility for the team's analytics pipeline and storage efficiency by 70%-90%.
- Introduced Slack notification alerts for NCAAF and NFL daily tasks to automatically notify traders when a fixture is rescheduled, and built logic to auto-update fixture keys for NCAAF, reducing reliance on manual fixture monitoring.
- Resolved long-standing technical debt across the NFL and NCAAF services, improving code maintainability and reducing risk for future development.
- Contributed to Kafka partition configuration work to support scalable message processing across services.

Software Developer - Lablogic

MAY 2023 — JULY 2024

Tech Stack: C#, .NET Framework, WinForms, SQL Server, NHibernate

- Contributed significantly to the enhancement and maintenance of a Laboratory Information Management System (LIMS) for PET production, ensuring adherence to global medical standards and enhancing operational efficiency across diverse regulatory environments.
- Engineered a REST API for processing application transactions and retrieving database data, which initiated moving the application to a web-based architecture.
- Led the development and implementation of a forms designer feature within a WinForms application, utilising DevExpress controls to enable users to create customisable forms to improve compliance.

- Oversaw the maintenance of a robust Quality Management System (QMS) within the software, ensuring strict compliance with GMP and FDA regulations by capturing requirements from experienced nuclear medicine professionals.
- Collaborated in the on-site installation and configuration of a new software system at a leading nuclear medicine site in Finland, demonstrating exceptional technical skill.

Junior Software Developer - StayInFront

NOVEMBER 2022 — JUNE 2023

Tech Stack: C#, ASP.NET, JavaScript, Entity Framework, SSIS, SQL Server

- Implemented an SSIS data integration script that enhanced location data collection for the predictive analytics team, leading to a significant increase in the machine learning model's accuracy from 46% to 88%.
- Upgraded the UI and backend architecture of tailored .NET applications for major clients such as Nestle, ensuring better performance and a more engaging user experience.
- Developed and designed an intuitive internal dashboard to monitor and visualise crucial company metrics, enhancing data-driven decision-making and overall business efficiency.
- Designed custom PowerBi reports leveraging server data and seamlessly embedded them into existing applications for enhanced data analysis and visualisation.

Production Planner - Sherwin Williams

SEPTEMBER 2020 — NOVEMBER 2022

- Developed an improved system for planning batches, whilst adhering to tight schedules and demand planning requirements. Identified issues with paint volume discrepancies resulting in waste quantities being over-reported by hundreds of thousands of litres.
- Improved the reporting of finished stock quantities by implementing improvements for the Oracle ERP production workflow, increasing the reported quantity by over a thousand pallets a year.

Airport Services Coordinator - Qantas, Sydney (Australia Working Holiday)

DECEMBER 2019 — MARCH 2020

- Lead admin for an in-house business project, adhering to corporate NDA in a media-sensitive role by organising contingency training for the existing head office employees in the event of unionised industrial action.
- Reduced the overall project time by developing a training matrix to track staff competencies and documentation from previous training courses.

Supply Chain Coordinator - Sherwin Williams

JANUARY 2017 — OCTOBER 2018

- Head Oracle production user, directly responsible for 3 out of 7 production KPIs and managing the ERP system by amending on-hand stock discrepancies and overseeing operations for the finished goods dispatch area.
- Trained operators on the correct usage of Oracle OPM interfaces for completing work orders by creating a suite of SOPs for supply chain systems to facilitate the continued training of staff based on auditors' requirements.
